OBJECT-ORIENTED PROGRAMMING

WEEK 2 | Laboratory Activity 2: Comprehensive Application of Access Modifiers, Constructors, Destructors, and Method Overloading

```
<?php
```

```
class Book {
```

```
    public $title;
```

```
    protected $author;
```

```
    private $price;
```

```
    public function __construct($title, $author, $price) {
```

```
        $this->title = $title;
```

```
        $this->author = $author;
```

```
        $this->price = $price;
```

```
    }
```

```
    public function getDetails() {
```

```
        return "Title: {$this->title}, Author: {$this->author}, Price: \${$this->price}."<br>";
```

```
    }
```

```
    public function setPrice($price) {
```

```
        $this->price = $price;
```

```
    }
```

```
    public function __call($method, $args) {
```

```
        if ($method == 'updateStock') {
```

```
        echo "Stock updated for '{$this->title}' with arguments: " . implode(', ', $args). "<br>" .
PHP_EOL;
```

```
    } else {
```

```
        throw new Exception("Book object has no attribute '$method'");
```

```
    }
```

```
}
```

```
}
```

```
class Library {
```

```
    private $books;
```

```
    public $name;
```

```
    public function __construct($name) {
```

```
        $this->name = $name;
```

```
        $this->books = [];
```

```
    }
```

```
    public function addBook(Book $book) {
```

```
        $this->books[] = $book;
```

```
    }
```

```
